

The image features a large, yellow and red oil rig structure against a blue sky with scattered white clouds. The rig is the central focus, with a tall derrick extending upwards. In the foreground, there is a muddy construction site with various pieces of equipment, including a crane on the left and several storage containers or trailers on the right. The overall scene depicts an active industrial or mining site.

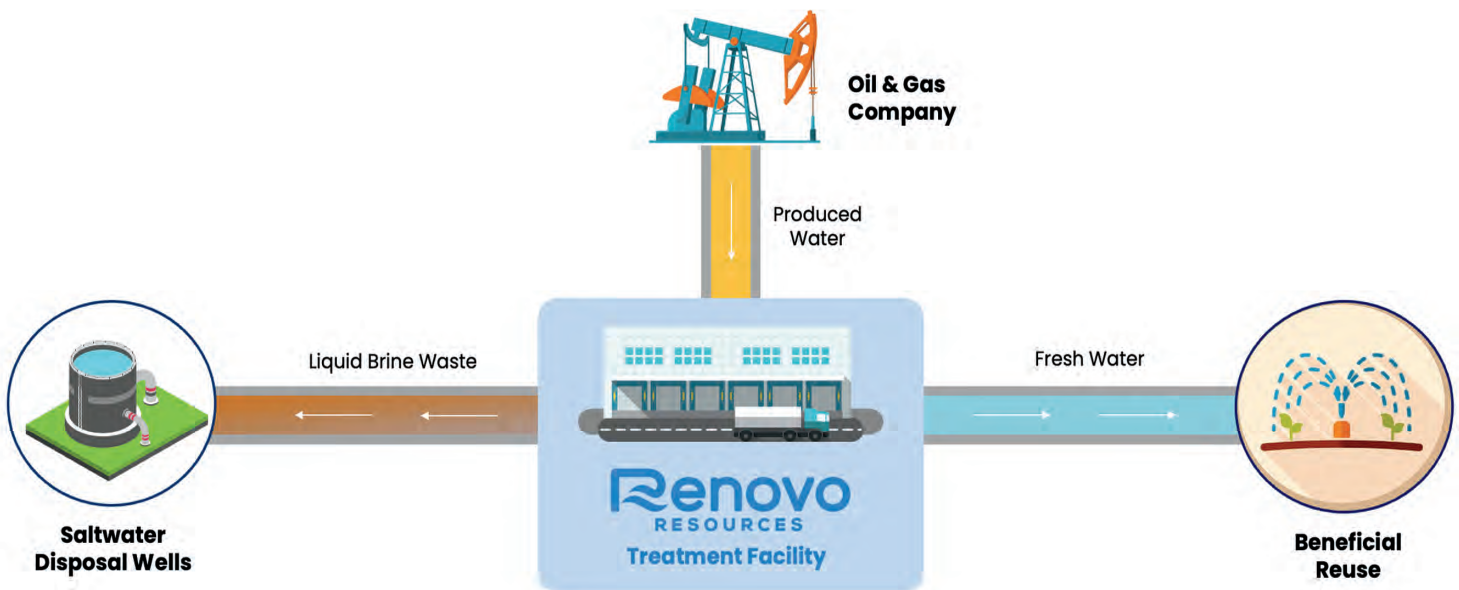

Renovo

RESOURCES

Who We Are

Renovo Resources is an asset development company that provides turnkey solutions for the beneficial reuse of produced water. With financial backing by Tailwater Capital and strong partners for technology and services, we provide reliable alternate solutions for the treatment and disposal of produced water. Our environmentally sustainable solution generates a new source of reliable freshwater for industries, water districts, and farming communities thereby protecting precious potable water resources.

Our Solution

Renovo Resources brings together the best technology, engineering, construction, and operations services along with capital financing to provide comprehensive produced water treatment solutions with single point responsibility. Our treatment solutions involve desalination processes such as reverse osmosis or thermal evaporation technologies with necessary pretreatment and post-treatment processes to generate high quality fresh water suitable for beneficial reuse.

Our Capabilities

Our turnkey project delivery includes:

1. Project development (Pilot, FEED, Contracts)
2. Capital investment for the treatment facility
3. Technology
4. Design build
5. Operations & maintenance
6. Fresh water delivery
7. Disposal of waste generated (Liquids/solids)

Our Value Proposition

Our unique value proposition includes:

1. No capital outlay required
2. Transfer risk & liability for water treatment
3. Single point responsibility for the facility
4. Proven expertise in produced water treatment
5. Reliable partners for technology and services
6. ESG compliant sustainable solution
7. New water for beneficial use

Key Benefits

To the oil & gas exploration and production companies

- Reliable alternate solution for disposal of produced water
- ESG-compliant sustainable solution for management of produced water
- License to operate overcoming disposal issues associated with injection

To the environment and community

- New freshwater source from treatment of produced water
- Substantially minimize saltwater disposal well injection volumes
- High quality freshwater (TDS <1,500 mg/l, Boron <0.75 mg/l, NH₃-N <2 mg/l)

To the freshwater users

- Long-term, reliable freshwater source with high availability
- No unpredictability impacts due to regional droughts
- Freshwater suitable for surface discharge, farming, and industrial use

Our vision is to protect precious water resources by providing sustainable and complete treatment solutions
